Omega-conotoxins are isolated from venoms of predatory marine snalls, and have a selectivity for N-type calcium channels over P/O type channels, and and so block N-type calcium channels. The omega-conotoxins of the invention can be used in any disease or disorder where blockage of N-type calcium channels is required, e.g. in the reduction of neuronal damage following ischemia, production of analgesia, or enhancement of opiate analgesia, in the treatment of schizophrenia, stimulant induced psychoses, hypertension, inflammation, and diseases which cause pronototension, and also in the inhibition of progression of neuropathic pain. They can also be used in a screen to identify compounds with activity at N-type voltage sensitive calcium channels.
                                                         Omega-conotoxin, venom; predatory marine snail; N-type calcium channel; neuronal damage reduction; ischemia; analgesia; opiate analgesia; VVID; schizophrenia; stimulant induced sychosis; hypertension; inflammation; bronchotension; neuropathic pain; voltage sensitive calcium channel.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Omega-conotoxin, venom; predatory marine snail; N-type calcium channel; neuronal damage reduction; ischemia; analgesia; opiate analgesia; CVID; schizophrenia; stimulant induced psychosis; hypertension; inflammation; bronchotension; neuropathic pain; voltage sensitive calcium channel.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel peptides used for the treatment of disorders and diseases where blockage of the N-type calcium channels is required .
                   Amino acid sequence of an omega-conotoxin derivative of CVID.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Amino acid sequence of an omega-conotoxin derivative of CVID.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Omega-conotoxins are isolated from venoms of predatory marine snails, and have a selectivity for Nitype calcium channels over P/O type channels, and and so block N-type calcium channels. The omega-conotoxins of the invention can be used in any disease or disorder where blockage of N-type calcium channels is required, e.g. in the reduction of neuronal damage following ischemia, production of analgesia, or enhancement of opiate analgesia, in the treatment of schizophrenia, stimulant induced psychoses, hypertension, inflammation, and diseases which cause pronchotension, and also in the inhibition of progression of neuropathic pain. They can also be used in a screen to identify compounds with activity at N-type voltage sensitive calcium channels.
                                                                                                                                                                                                                                                                                             Omega-conotoxin; venom; predatory marine snail; N-type calcium channel; neuronal damage reduction; ischemia; analgesia; opiate analgesia; CVID; schizophrenia; stimulant induced psychosis; hypertension; inflammation;

                                                                                                                                                                                                                                                                                                      Omega-conotoxins are isolated from venoms of predatory marine snails, and have a selectivity for N-type calcium channels over P/O type channels, and and so block N-type calcium channels. The omega-conotoxins of the invention can be used in any disease or disorder where blockage of N-type calcium channels is required, e.g. in the reduction of neuronal damage following ischemia, production of analgesia, or enhancement of opiate analgesia, in the treatment of schizophrenia, stimulant induced psychoses, hypertension, inflammation, and diseases which cause bronnottension, and also in the inhibition of progression of neuropathic pain. They can also be used in a screen to identify compounds with activity at N-type voltage sensitive calcium channels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Omega-conotoxin; venom; predatory marine snail; N-type calcium channel; neuronal damage reduction; ischemia; analgesia; Opiate analgesia; OVID; schizophrenia; stimulant induced psychosis; hypertension; inflammation; bronchotension; neuropathic pain; voltage sensitive calcium channel.

Omega-conotoxins are isolated from venoms of predatory marine snails, and have a selectivity for N-type calcium channels over P/O type channels, and and so block N-type calcium channels. The omega-conotoxins of the invention can be used in any disease or disorder where blockage of N-type calcium channels is required, e.g. in the reduction of neuronal damage following ischemia, production of analgesia, or enhancement of opiate analgesia, in the treatment of schizophrenia, stimulant induced psychoses, hypertension, inflammation, and diseases which cause bronchotension, and also in the inhibition of progression of neuropathic pain. They can also be used in a screen to identify compounds with activity at N-type voltage sensitive calcium channels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Omega-conotoxin; venow; predatory marine snail; N-type calcium channel; neuronal damage reduction; ischemia; analgesia; opiate analgesia; CVID; schizophrenia; stimulant induced psychosis; hypertension; inflammation; bronchotension; neuropathic pain; voltage sensitive calcium channel.
                                                                                                                                                                                                                                                                                                                                                                                                                            Novel peptides used for the treatment of disorders and diseases where blockage of the N-type calcium channels is required \,

AMY43718-36 represent derivatives of omega-conotoxin CVID.

Omega-conotoxins are isolated from venoms of predatory marine snails, and have a selectivity for N-type calcium channels over P/Q type channels, and so block N-type calcium channels over P/Q type channels. The omega-conotoxins of the invention can be used in any disease or disorder where blockage of N-type calcium channels is required, e.g. in the reduction of neuronal danage following ischemia, production of analgesia, or enhancement of oplate analgesia, in the treatment of schizophrenia, stimulant induced psychoses, hypertension, inflammation, and diseases which cause bronchotension, and also in the inhibition of progression of neuropathic pain. They can also be used in a screen to identify compounds with activity at N-type voltage sensitive calcium channels. Novel peptides used for the treatment of disorders and diseases where blockage of the N-type calcium channels is required $\,$

Movel omega-conotoxins from Conus catus discriminate among neuronal calcium channel subtypes."
J. Biol. Chem. 275:35335-35344(2000)
I- FUNTION: Omega-conotoxins act at presynaptic membranes, they bind and block voltage-sensitive calcium channels (VSCC) (By similarity). This toxin blocks N-type calcium channels.
I- SUBCELLULAR LOCATION: Secreted.
I- TISSUE SPECIFICITY: Expressed by the venom duct.
I- SIMILARITY: BELONGS TO THE O-SUPERFAMILY OF CONOTOXINS. OMEGA-TYPE FAMILY.
                                                                                                                                                                                                                                       Presynaptic neurotoxin; Neurotoxin; Toxin; Calcium channel inhibitor; Amidation; Signal.

```

```
FUNCTION: Omega-conotoxins act at presynaptic membranes, they bind and block voltage-sensitive calcium channels (VSCC). This toxin blocks N-type calcium channels.
SUBCELLULAR LOCATION: Secreted.
TISSUE SPECIFICITY: Expressed by the venom duct.
FIRSUE SPECIFICITY: Expressed by the v
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Atkinson R.A., Kieffer B., Dejaegere A., Sirockin F., Lefevre J.-F.; "Structural and dynamic characterization of omega-conotoxin MVIIA: the binding loop exhibits slow conformational exchange."; Biochemistry 39:3908-3919(2000).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        "Structure-activity relationships of omega-conotoxins MVIIA, MVIIC and 14 loop splice hybrids at N and P/Q-type calcium channels."; J. -!- FUNCTION: POSSIBLE REGULATOR OF LYMPHOCYTE AND PLATELET FUNCTION.

MAY BE INVOLVED IN SIGNALING PATHWAYS WITH CYTOSKELETAL FUNCTION.

-!- SUBUNT: BINDS TO COC42, RAC, NCK, FYN, SRC KINASE FGR, BTK, ABL,

WIP, AND TO THE P85 SUBUNIT OF PLC-GAMMA.

-!- TISSUE SPECIFICITY: EXPRESSED PRESDOMINANTLY IN THE THYMUS. ALSO
FOUND, TO A MUCH LESSER EXTENT, IN THE SPLEEN.

-!- DOMAIN: THE WHI (WASP HOMOLOGY 1) DOMAIN MAY BIND A PRO-RICH

I. FANSPEPTIDATION REACTIONS DURING THE LAST STAGES OF WALL PEPUICOCUCE FOR A NORMAL SUBSTRARING A BETA-LACTAM ANTIBIOTIC MOLECULE FOR A NORMAL SUBSTRATE (I.E. A D-ALANYLE)-ALANINE-

TERMINATED PEPTIDE), IT BECOMES IMMOBILIZED IN THE FORM OF A LONG-LIVED, SERINE-ESTER-LINKED ACYL ENZYME AND THUS BEHAVE

AS PRINCILLIN-BINDING PROTEIN (PBP).

I. CATALYTIC ACTIVITY: D-alanyl-D-alanine + H(2)0 = 2 D-alanine.

I. SUBCELLULAR LOCATION: Secreted.

I. SUBCELLULAR ELOCATION: Secreted.

II SIMILARITY: BELONGS TO PEPPTIDASE FAMILY S12; ALSO KNOWN AS THE D-ALANYL-D-ALANINE CARBOXYPEPTIDASE 2 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MEDLINE-90351121; PubMed-2386365;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DNA RES. 7:31-63(2000).

-!- FUNCTION: MAY INTERACT WITH A CLPP-LIKE PROTEASE INVOLVED IN DEGRADATION OF DEMATURED PROPEINS IN THE CHLOROPLAST.

-!- SUBCELLULAR LOCATION: CHLOROPLAST (Potential).

-!- INDUCTION: BY DEHYDRATION STRESS. INDUCED AFTER ONE HOUR OF DEHYDRATION-STRESS AND REACHES MAXIMAL LEYELS AFTER 10 HOURS.

-!- SIMILARITY: BELONGS TO THE CLPA/CLPB FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            STRAIN=cv. Peroxisomal.
-!- DISEASE: DEPECTS IN ABCD1 ARE THE CAUSE OF RECESSIVE X-LINKED
ADRENOLEUKODYSTROPHY (X-ALD), A RARE PEROXISOMAL METABOLIC
DISORDER THAT OCCURS IN BOYS AND IS CHARACTERIZED BY PROGRESSIVE
MULTIFOCAL DEMYELINATION OF THE CENTRAL NERVOUS SYSTEM AND BY
ADRENOCOPTICAL INSUFFICIENCY. IT PRODUCES MENTAL DETERIORATION,
CORTICOSPINAL TRACT DYSTENICTION, AND CORTICAL BLINDMESS. THERE IS
LABORATORY EVIDENCE OF ADRENAL CORTICAL DYSFUNCTION. DIFFERENT
CLINICAL MANIFESTATIONS EXIST LIKE: CEREBRAL CHILDHOOD ALD (CALD),
ADDILT CEREBRAL ALD (ACALD), ADDIVECONVELONEORPHY (AMN) AND
"ADDISON DISEASE ONLY" (ADO) PHENOTYPE.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Probable transport protein ALD - human
N.Alternate names: adrenoleukodystrophy protein
N.Alternate names: adrenoleukodystrophy protein
C.Species: Bomo sapiens (man)
C.Species: Homo sapiens (man)
C.Saccession: G02500; S30059
R.Platzer: A. Bauder, D.: Drescher, B.
R.Accession: G02500
A.Reference number: H01367
A.Reference number: H01367
A.Residues: 1-745 < PLAA
A.Status: translated from GB/EMBL/DDBJ
A.Rosser, J.: Douar, A.M.: Sarde, C.O.: Kloschis, P.: Fell, R.: Moser, H.: Poustka, A.
